

PROSTASTREAM

An all-natural supplement that will allow you to target the real root cause of BPH: a severe inflammation caused by the body.

Have you lately received a benign prostatic hyperplasia (BPH) diagnosis? Is it difficult for you to obtain a peaceful night's sleep due to the many visits to the toilet and the overwhelming pain? Typically, men are recommended to take alpha-blockers, which temporarily alleviate the symptoms of BPH. There must be a way around this, correct? This is where ProstaStream comes into play.

[CLICK HERE TO CHECK DISCOUNTED PRICE \(24HRS LIMITED OFFER\)](#)

Forget interim remedies that just build reliance over time; a new method is believed to permanently address BPH. According to Frank Neal, the founder of ProstaStream, all it takes is a special blend of plants and herbs to encourage a calm mind, relaxation, and a healthy prostate, urinary system, and bladder, among other benefits. Beginning with its intended function, the review that follows will explore every facet of ProstaStream.

What exactly is ProstaStream?

ProstaStream is a dietary supplement designed to promote prostate health. Men diagnosed with benign prostatic hyperplasia (BPH) may find solace in this natural treatment. BPH is a disorder in which the prostate gland enlarges in males. Although little is known about the processes behind BPH, it has been shown that variables such as changes in male sex hormones and age have a crucial impact.

However, it is believed that an enlarged prostate exerts tremendous pressure on the bladder and urethra (i.e., the tube that allows the flow of urine). As a result, males have a broad variety of symptoms, ranging from frequent visits to the toilet and discomfort during urination to the inability to entirely empty the bladder.

According to the product's official sales website, ProstaStream, which claims to have been developed by Frank Neal, seeks to treat the underlying reasons of an enlarged prostate. Frank feels that the statements made by society that age and variations in male sex hormones are the sole known causes are incomplete. What may be the piece(s) missing? Inadequate inflammatory response and immune system, it turns out, are causes of enlarged prostates. By reversing the extra variables, it is anticipated that one's prostate health would improve over time.

With the above information in mind, the only way to completely comprehend the ProstaStream recipe is to examine the chosen chemicals that determine the health of the prostate!

What components make up ProstaStream?

ProstaStream is a comprehensive recipe, since each serving contains up to 32 components. To ensure that folks are aware of what they are consuming, we've chosen to emphasize a few facts about the attributes of each item. Here is what we've gathered so far (the concentrations stated are per serving):

Complex Sterols from Plants (300mg)

Plant sterols are a class of plant-derived compounds. Since then, they have been generally associated with decreasing cholesterol levels and may prevent cardiovascular illnesses and several malignancies. Antioxidant, anti-cancer, anti-atherogenicity, and anti-inflammatory qualities account for the latter advantages.

Saw Palmetto Berries (200mg)

Supposedly, saw palmetto berries grow on a tree named *Serenoa repens*. These berries have been used for centuries to promote male health in traditional medicine. To be more precise, it is believed that consuming these berries would reduce inflammation, enhance the urinary system, prevent hair loss, and maybe boost testosterone levels and prostate health.

Bark of Pygeum Africanum (100mg)

The bark of the tree *Pygeum* has been extensively utilized for therapeutic reasons. At the time of writing, we learned that this substance is vital in some populations, particularly for the treatment of BPH-related symptoms, inflammation-related pains, kidney-related issues, and stomachache, among others.

Raspberry red (50mg)

Raspberries are often appreciated for their modest sweetness. What many people may not realize is that they have long been used in traditional medicine. Why? According to current studies, this fruit is not only rich in vitamins and minerals (e.g., B vitamins, vitamin C, zinc, magnesium, etc.), but its antioxidant capabilities are also highly regarded.

Annona Muricata Leaf (50mg)

Annona muricata, sometimes known as soursop, is a blooming, evergreen tree whose leaves have been used in medical mixtures. Anti-inflammatory and anti-cancer actions are among the pharmacological features attributed to its therapeutic capabilities.

Green Leaf Tea (50mg)

Green tea is often drunk due to its abundance of epigallocatechin-3-gallate, one of the few most effective antioxidants known to humans. This permits this component to excel in several health-related areas, including brain function, fat buildup, heart health, and malignancies, including prostate cancer.

Cat Scratch Bark (30mg)

Cat's claw is a rainforest-dwelling vine that is common in South and Central America. If this component is of

interest, it is available in many species, with *Uncaria tomentosa* and *Uncaria guianensis* being the most prevalent. This chemical is intriguing since it may treat different ailments. Inflammatory bowel disease and other inflammation-related hazards, diarrhea, eczema, and Alzheimer's are among examples.

Broccoli Stems, Leaves, and Buds (20mg)

Broccoli is a cruciferous vegetable that is rich in fiber, protein, and other vitamins and minerals. This quality is advantageous for males with BPH. Some research shows that cruciferous vegetable consumption may slow the development of prostate cancer and potentially halt its progression.

Tomato (10mg) (10mg)

Tomatoes have the greatest quantity of an antioxidant known as lycopene, which has been shown to slow the course of BPH. Additionally, it may be consumed to meet vitamin C, potassium, and folate needs, to mention a few. In addition to its antioxidant qualities, this substance may help promote a healthy inflammatory response.

Leaf of Stinging Nettle (20mg)

Nettle is a perennial herbaceous blooming plant that has been related with anti-inflammatory qualities. If we study

what the scientific literature says about its consumption, there is evidence that it may decrease inflammation, treat BPH, and promote healthy blood pressure and glucose levels.

Supplement Facts

Serving Size: 2 Capsules
Servings Per Container: 30

	Amount Per Serving	% Daily Value
Vitamin E (as D-Alpha Tocopherol Succinate)	13 mg	87%
Vitamin B6 (as Pyridoxine Hydrochloride)	3.33 mg	166%
Zinc (as Zinc Oxide)	10 mg	91%
Selenium (as Selenium Glucosate)	140 mcg	280%
Copper (as Copper Amino Acid Chelate)	0.2 mg	23%
Star Pattern(Ginger)	200 mg	-
Plant Sterol Complex	300 mg	-
Pigment (Lycium/Bark)	100 mg	-
Red Raspberry(Fruit)	50 mg	-
Astragalus(Root/Leaf)	50 mg	-
Green Teal(Leaf)	50 mg	-
Gulf Cree(Dirt)	30 mg	-
Blood Leaf (Stems and Buds)	20 mg	-
Tomato(Fruit)	10 mg	-
Shiitake (Fruit/Leaf)	20 mg	-
Maitake(Mushroom)	10 mg	-
Reishi(Mushroom)	10 mg	-
Shiitake(Mushroom)	10 mg	-
Proprietary Blend	140 mg	-

Quercetin Dihydrate, Juniper(Berry), Uva Ursi(Leaf), Buchu(Leaf), L-Glutamic Acid, L-Alanine, L-Glycine, Calcium D-Glucarate, PumpkinSeed, Burdock(Root), Cayenne Pepper(Fruit), Cardamom(Seed), Orzels(Root), Marshmallow(Root).

* Daily Value not established.

Other Ingredients: Rice flour, gelatin(bovine), silicon dioxide and vegetable magnesium stearate.

ALLERGEN WARNING: CONTAINS SOY(PLANT STEROLS)

PROSTA⁺ STREAM

DIETARY SUPPLEMENT

60 TABLETS

Suggested Use:
As a dietary supplement, adults take two capsules daily.

Caution:
If you are currently taking any medication, consult with a physician prior to use. Do not exceed suggested use. Keep out of reach of children.

Storage:
Store this product in a cool dry place below 30°C (86°F).

KEEP OUT OF REACH OF CHILDREN. DO NOT USE IF SAFETY SEAL IS DAMAGED OR MISSING. STORE IN A COOL, DRY PLACE.

NATURAL & SAFE

100% PURE

Maitake, Reishi and Shiitake Mushrooms and Roots (30mg)

Maitake, reishi, and shiitake mushrooms are renowned for their elevated amounts of cytokines, which play a crucial role in enhancing immune cell responses. In addition to the presence of cytokines, it is thought that the presence of an antioxidant termed ergothioneine significantly impacts prostate health by reducing cancer risk.

Vitamin E (13mg)

Vitamin E is an important vitamin with anti-inflammatory and antioxidant effects. This is a unique component since it is abundant in many habitats with which we are familiar (i.e., sunflower oil, almonds, pumpkin, red bell peppers, etc.). The effect of this vitamin in prostate health is reportedly complex, since it may either improve or aggravate the condition.

Vitamin B6 (3.33mg)

Vitamin B6, commonly known as pyridoxine, is similar to vitamin E in that it may also be obtained through food (i.e., pork, chicken, turkey, fish, peanuts, soya beans, etc.). Regarding the prostate, this vitamin may inhibit the testosterone hormone from causing prostate-located tumor development. It is crucial to note that the conclusion is based on a single research.

Zinc (10mg) (10mg)

Zinc is an important trace mineral that occurs naturally in the foods we eat. It has been entrusted with modifying immunological, renal, stomach, colon, and metabolic systems, as well as assisting in healing processes. The majority of persons with BPH or prostate cancer are considered to have a zinc deficiency, which is a remarkable discovery that has subsequently been discussed.

Selenium (140mcg) (140mcg)

Selenium is a sort of antioxidant that protects the body from oxidative stress and poisons while constructing a thick barrier against future intruders. The plasma, serum, and tissue of this antioxidant are believed to be inversely connected to the chance of developing prostate cancer; that is, an increase in selenium may reduce the number of prostate cancer cells.

Copper (0.2mg) (0.2mg)

Copper is considered a cofactor for a number of enzymes and is an important trace mineral. It may assist cardiovascular health and Alzheimer's disease, according to research. Since copper and zinc belong to the same category, one may anticipate that they will produce outcomes in tandem.

Additionally, ProstaStream has a proprietary mix (142mg) that is claimed to contain:

Quercetin Dihydrate

Quercetin dihydrate is an insoluble pigment categorized as a flavonoid that contains a significant amount of antioxidants. It is anticipated that this would decrease inflammation, allergy symptoms, and blood pressure. In

addition, quercetin may prevent prostate cancer due to its anti-cancer properties.

Juniper Berry

Juniper berries originate from the evergreen *Juniperus communis* bush. Not only are they abundant plant chemicals, but they also possess anti-inflammatory, antioxidant, anti-diabetic, antibacterial, and anti-fungal activities.

Uva Ursi

Similar to *Juniperus communis*, *Uva ursi* is a shrub that produces flowers and fruit; its berries are often used to manufacture medicine. It has been used historically to treat urinary tract infections, which has been partially shown.

Buchu Leaf

Buchu is an African herb that has been used to treat the bladder, urinary tract infections, inflammation, and the inflammation-induced effects on the prostate.

L-Glutamic Acid, L-Alanine, and L-Glycine

L-glutamic, L-alanine, and L-glycine are all forms of non-essential amino acids. While the effect of these trio of compounds remains unknown, consuming them

together has allegedly been proved to alleviate prostate symptoms such as midnight urination, prostate enlargement, and urinary frequency and pain.

D-Glucarate

Also known as calcium D-glucarate, this component is little more than salt. Nevertheless, its advantages are immense. According to reports, it may prevent breast, prostate, and colon cancers by eliminating toxins and cancer-causing substances.

Pumpkin Seeds

The pumpkin seed, often known as pepita, is an edible seed found in pumpkins. It is rich in both important minerals and antioxidants. Overall, supplementation with pumpkin seeds may benefit the health of the prostate, bladder, and heart, as well as reduce blood sugar levels.

Burdock

Burdock is a species of biennial plant used in alternative medicine for its roots, leaves, and seeds. The crucial aspect of this plant is its seeds, which contain arctigenin, a lignan component. To be more precise, it has been discovered that arctigenin may inhibit the development of prostate tumors.

Cayenne Pepper

Capsaicin, a component of cayenne pepper, has anti-inflammatory and gastroprotective qualities, making it a sought-after ingredient. It is important to emphasize its anti-inflammatory capabilities, since they may kill prostate cancer cells. However, further study is still necessary before reliable conclusions may be drawn.

Goldenseal

Goldenseal, or *Hydrastis Canadensis*, is a North American perennial herb. Regarding its qualities, the roots and leaves of this plant have traditionally been used in traditional medicine to treat infections and/or inflammation.

Gravel Root

Gravel root is a perennial herbaceous plant that has subsequently been recognized as a member of the sunflower family. Its roots and bulb are mostly used to treat urinary tract disorders, bladder infections, and painful urination, despite safety concerns, reportedly.

Frequent Requested Information (FAQs)

Who established ProstaStream?

The sales website claims that Frank Neal is the inventor of the ProstaStream formula. Frank claims that he spent

years doing personal trials and studies in order to arrive at his so-called "unique combination of components that may help anybody maintain a healthy prostate." Our first worry is that we know very little about Frank and the manufacturing firm. In actuality, "Frank Neal" is an alias created to conceal the author's identity.

What capabilities can ProstaStream offer?

According to the supplement's label, "The Food & Drug Administration has not reviewed these assertions.", it is presumed that ProstaStream is created in the United States. Furthermore, it is natural, safe, and 100% pure.

What is the recommended application of ProstaStream?

ProstaStream should be used as a nutritional supplement; two capsules per day are indicated.

Is it usually safe to take ProstaStream?

ProstaStream seems to be usually safe given that it contains just plants, herbs, vitamins, and minerals. Despite this, consumers must consider their health and the reality that many all-natural substances may lack scientific support or, depending on the illness being treated, may be detrimental to health. Before purchasing ProstaStream, anybody using prescription medicine should visit a physician.

Are there any adverse effects associated with ProstaStream?

As of this writing, no adverse effects have been documented. Nevertheless, ProstaStream contains soy (i.e., plant sterols). Therefore, those with such allergies should not use this product.

How quickly will I get ProstaStream?

It may take 5 to 7 business days and up to 15 business days, respectively, to deliver orders to U.S. and foreign destinations.

How do ProstaStream's refund procedures operate?

ProstaStream is protected by a money-back guarantee valid for sixty days. Therefore, people must first ensure that their requests to customer support at contact@prostastream.com are submitted within 60 days of the day their products were sent. The date will be placed on the package or distributed through email to ensure that everyone has a record. Once shipments have been accepted, they must be shipped to the fulfillment facility located at 37 Inverness Drive East, Suite 100, Englewood, Colorado 80112. The reimbursement will be executed after the return package has been received.

What is the cost of ProstaStream?

Each bottle of ProstaStream is available for the following prices:

1 bottle of ProstaStream (1-month supply) costs \$69 apiece.

3 bottles of ProstaStream (3-month supply) cost \$59 each.

6 ProstaStream bottles (6-month supply) are priced at \$49 a bottle.

International shipping and customs clearance expenses are not included in the aforementioned pricing. It was reported at the time of writing that overseas orders will incur a \$15.95 delivery cost. As for orders inside the United States, these costs do not apply.

Final Verdict

ProstaStream is a prostate supplement designed to treat the symptoms of benign prostatic hyperplasia. The strategy followed by the alleged "Frank Neal" entails removing toxins from the body and reducing inflammation, both of which may naturally serve to strengthen the immune system. Natural substances have been shown to enhance prostate health from several viewpoints, according to Frank.

We discovered that several of the substances had vitamins, minerals, antioxidants, and anti-inflammatory characteristics, to mention a few. In addition, we discovered a number of studies indicating that prostate troubles are exacerbated by a shortage in nutrients or that the presence of a certain component might prevent prostate tumor development, diminish prostate cancer effects, and perhaps erase its recognized symptoms.

Individuals must recognize that the preceding list of substances focuses largely on its qualities and not just on scientific data. Before continuing, we highly advise everyone to do their own due diligence (in terms of health, prescription interactions, medical history, etc.).

Another factor worthy of consideration is the lack of openness. Despite ProstaStream's advantageous characteristics, the firm, inventor history, goal statement, and quality testing have been concealed. This is certainly intended to provoke unease and skepticism, but fortunately, customer service information is accessible. Sending an email to the team or visiting the website may be the finest line of action for anyone desiring additional information about ProstaStream.
